

# Midcoast Aviation Receives STC for Challenger 604 EFB

Midcoast Aviation, a Saint Louis-based aviation support company, has earned an STC for installation of dual ADR FG-5000 electronic flight bags (EFBs) in the Bombardier Challenger 604.

"These flight bags allow Challenger 604 operators to experience the flight freedom that comes from converting charts and other paper-based information into electronic form and gaining fingertip control over aircraft operations manuals, logs, checklists and much more," said Blake Hogge, Midcoast's director of avionics sales.

The EFBs, which are manufactured by Advanced Data Research of Rochester Hills, Mich., are mounted on the right- and left-hand side of the cockpit between the window and side consoles. The FG-5000 features a 600-MHz Fujitsu computer accessed through a custom-touch screen. The system can run all Jeppesen charting products (such as Jeppview FliteDeck, FliteStar and FliteMap) and supports a range of informational tools, including electronic manuals and documents, performance and flight-planning software and the Internet.
