AIRSERVE WIFI CONNECT

The latest solution for your ADR EFB to display GPS and weather information wirelessly in the cockpit. ADR's Airserve WiFi Connect allows multiple EFBs to receive GPS and one system to receive weather data over 802.11b technology. This eliminates the need for wires and loose cables as a way to send information to your EFBs. Experience the latest in EFB technology with the new Airserve Wifi Connect.

By using the Airserve WiFi Connect, both EFBs can display electronic charts with positioning information simultaneously. This allows for a cleaner installation as well as more efficiency in the cockpit.
